# Al Trading Platform

Adrian, Gabe, Yagiz, and Odi

# What are we trying to achieve?

Our platform utilizes various advanced predictive machine learning models that give **recommendations** on trades for a variety of **stocks**. We aim to simulate a **trading environment** with our predictions to portray how our models are working any given day. Through this **platform**, we hope to help the average investor make more **informed decisions**.

### **Deliverables**

### Required

Long Short-Term Memory (LSTM)

XGBoost

Natural Language Processing
Reinforcement Learning (RL)

Convenient User Interface

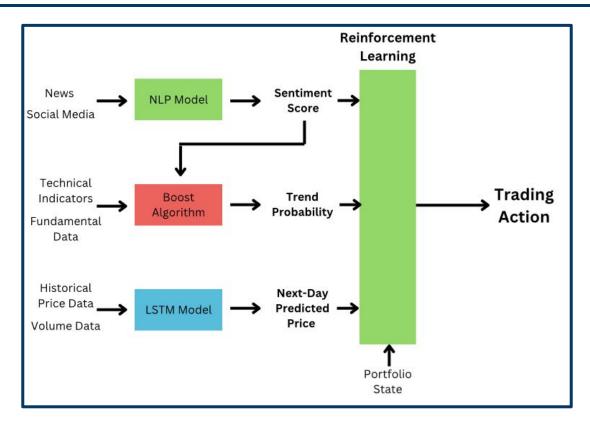

Algorithmic Platform Providing Trading Recommendations

### **Optional**

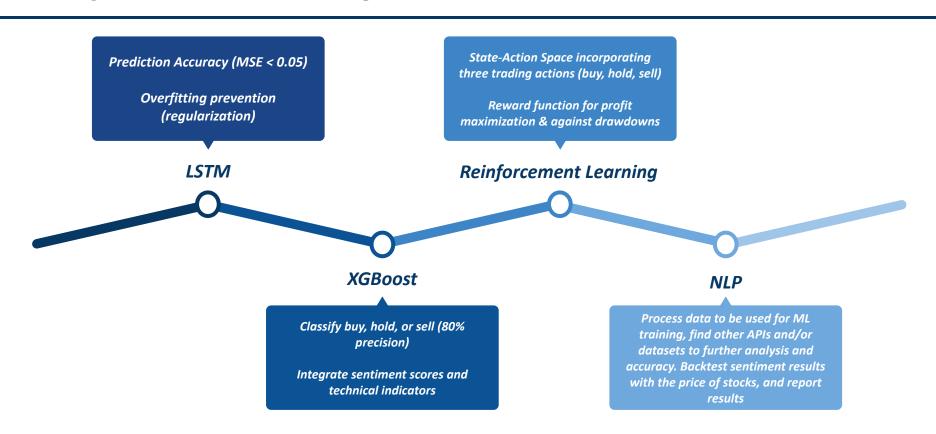

Trading Strategy Options

Market & Economic Updates

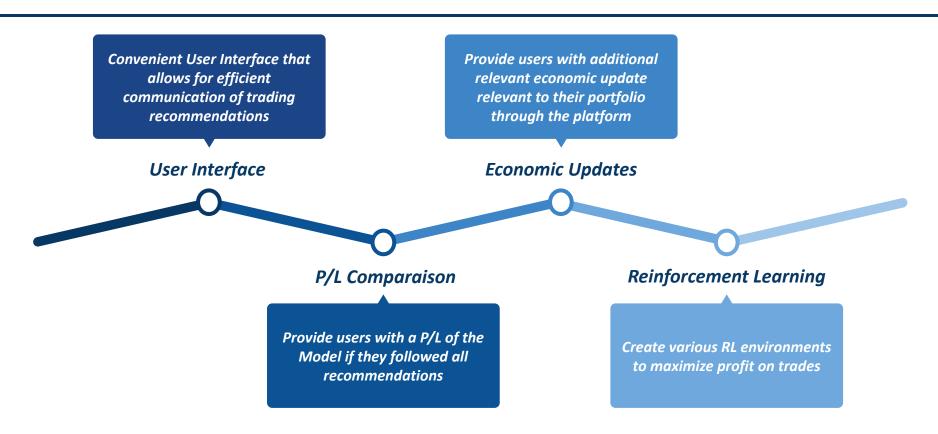

### **Model Architecture**

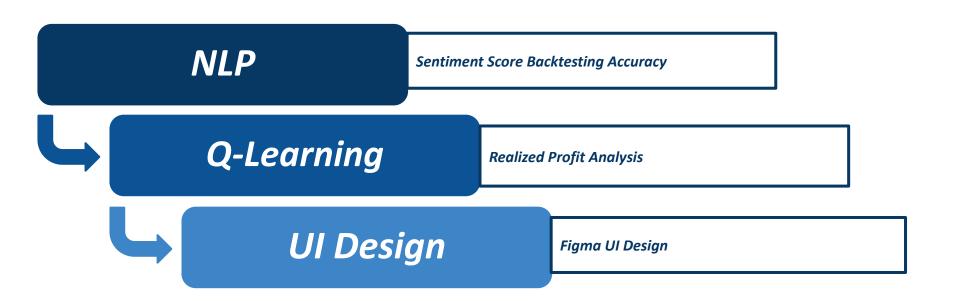

# Requirements Fulfilled

# Deliverables Left

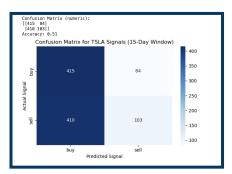

# **Prototype**

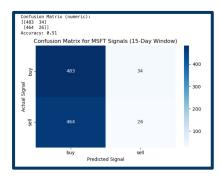

# **NLP Results: 50% Accuracy**

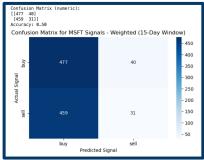

#### Tesla

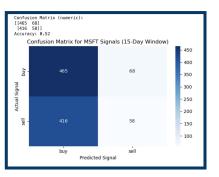

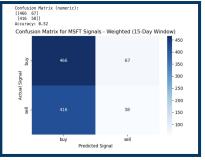

#### Coca Cola

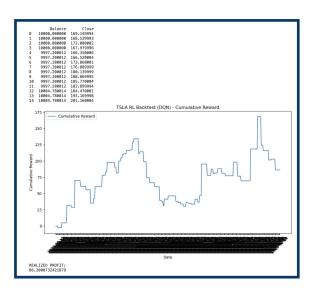

### Microsoft

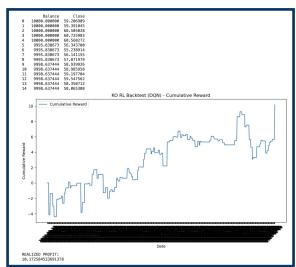

## Reinforcement Learning Realized Profit

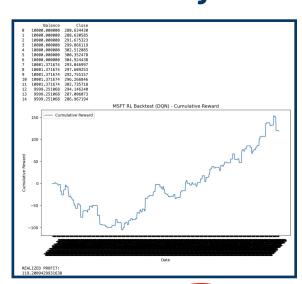

#### Tesla

#### Coca Cola

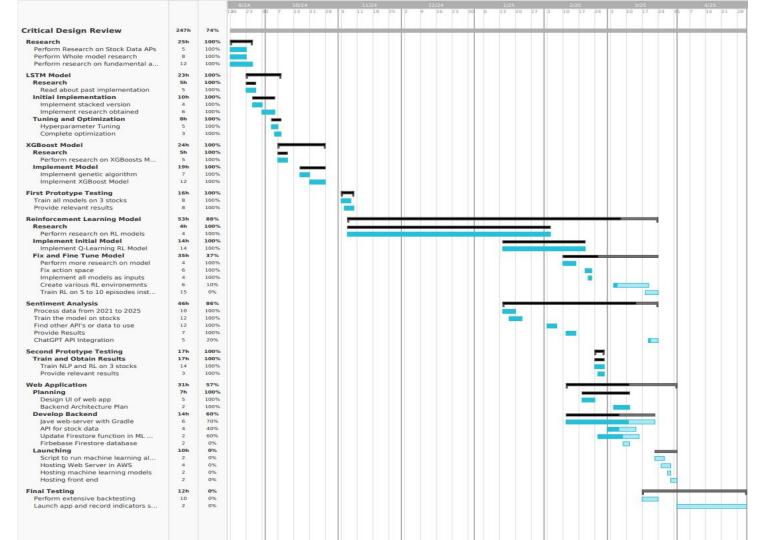

#### **Microsoft**

\$86 (+21%)

\$10 (+16%)

\$119 (+35%)

### **Conclusion**

- ★ Developed and fully tested ML models (including LSTM, NLP, XGBoost, and Reinforcement Learning)
  - Sufficient results
- ★ Strong foundation for our User Interface
  - Finish development hosted in the cloud
  - Fully test web application while developing
- ★ Compare full trading results against firms and see how to improve returns
